

Looking for a way to remove 340B inventory management burdens?

Modernize your 340B processes to improve efficiency and expand access to care

Managing a robust 340B program is complex. When it comes to replenishing drug supplies, your team faces challenges such as:

- spending time handling, processing, and reconciling physical items, which takes focus away from core responsibilities related to patient care
- allocating resources to maintain safe and compliant on-site storage for inventory that may not be fully utilized
- understanding and remaining compliant with evolving industry requirements and policy changes

Optimized processes for contract pharmacies

Leveraging a credit-based approach, 340B drugs are purchased without the need for on-site storage—streamlining distribution, lessening staff burdens, and expanding patient access to care.

Remove even more barriers to streamlined replenishment

Unlock the full potential of your 340B program with faster, simpler, and more efficient operations, without a TPA integration. Available soon, our self-service application will allow you to work directly with us to manage a virtual inventory—no additional connections required.

Move your pharmacy forward

With Cencora's virtual replenishment program, you can evolve alongside industry shifts while simplifying drug handling.

To learn more about Cencora's virtual replenishment program, reach out to 340B@Cencora.com.

Enhanced efficiency

Simplify replenishment ordering, minimizing time consuming true ups, claim reversals, and reconciliation due to unclaimed product

Increased insights

Minimize inventory burden and alleviate pharmacy cash flow challenges associated with 340B participation

Improved availability

Complete the 340B replenishment cycle more efficiently via the ability to credit out-of-stock, allocated, and non-available products

Streamlined processes

Eliminate the hassle of managing physical product, processing replenishment returns, and reconciling 340B inventory
