

Access evidence for thousands of products—all from one site

FormularyDecisions[®] provides US healthcare decision makers with connections to peer community opinions, access to evidence-based resources, and communication exchange with life sciences manufacturers.

Acquire product information early

- Reduce product review time for investigational and new products
- Access pre-approval information, clinical trial summaries, and P&T considerations
- Attend AMCP Pre-approval Information Exchange (PIE) Webinars
- Access Formulary Coverage Insights Data

Connect with manufacturers

- Seamlessly request dossiers, clinical, and economic information from numerous manufacturers
- Provide feedback to support the exchange of information

Review, compare and evaluate evidence

- Review product information on over 3,000 FDA-approved and pipeline products
- Utilize a centralized information repository of more than 1 million evidence links to credible scientific resources*
- Gain complimentary access to full-text articles from evidence-based literature

Share expertise and earn rewards

- Share how a product's perceived value impacts the formulary placement process
- Evaluate usefulness of evidence sources

Join one of the largest communities of healthcare decision makers in the US – representing more than 269 million covered lives

Eligible participants include the following:

- Public and private sector (e.g., third-party payers, health plan sponsors, state Medicaid programs, Medicare programs)
- Formulary committees (e.g., pharmacy and therapeutics committees)
- Drug information centers and technology assessment committees
- Pharmacy benefit managers and third-party administrators
- Other multidisciplinary entities (e.g., integrated delivery networks and health systems)

Eligible healthcare decision makers can register for FREE.

Here is what your peers are saying about FormularyDecisions:

““

FormularyDecisions is a trustworthy resource that provides access to high quality, factual, and up-to-date information on medications. It helps my organization stay abreast on new therapies, review medications currently on the market, and better understand the complex and rapidly changing specialty drug marketplace.”

– Pharmacist Program Manager, Health Plan

“FormularyDecisions provides a comprehensive resource for managed care pharmacists that are charged with monitoring the pipeline, P&T Committee work as well as educating organizations on upcoming drugs in the pipeline. It also provides a central place for many of the evidence tools such as the Pharmacist’s Letter with the relevant topics highlighted. The biosimilar hub is an excellent addition to help answer the question on which biosimilars are available and the next ones will be available.”

””

– Clinical Pharmacy Consultant, Pharmacy Consultancy

““

The team I oversee uses FormularyDecisions to find pertinent research instead of utilizing individual sites/web searches. Additionally, the dossier request tool is important – most of the team doesn’t have a relationship with the pharma reps, so having a centralized place to request is much easier than trying to track down a contact with individual manufacturers.”

– Vice President, Medicare Part D, Pharmacy Benefits Manager (PBM)

“The value of FormularyDecisions is that it’s more encompassing and has some additional resources/reports such as pipeline, biosimilars, and drug class reviews that cannot be readily found online from reputable agencies.”

””

– Clinical Account Manager, Pharmacy Benefits Manager (PBM)

““

FormularyDecisions is a valuable repository of information related to medications and their clinical utility. It is a central source to obtain the basic clinical information, easily compare medications, and evaluate the economic value based on organizational evaluations (like ICER reports).”

– Clinical Pharmacist, Health Plan
