

Revenue cycle optimization

Helping hospital pharmacies aggregate disparate data across the entire drug lifecycle to enhance revenue capture

Without access to the right data, you may be missing significant revenue opportunities. Revenue cycle optimization is a data aggregator that helps you identify potentially overlooked revenue sources, appropriately maximize margins, and reduce unused product. It provides insights across the entire drug lifecycle, integrating streams of data – often siloed in different departments and hard to normalize – into a single view.

Streamline integration

- Improve integration between pharmacy and billing departments
- Reduce administrative work by consolidating disparate systems
- Reconcile purchases, charges, and reimbursements

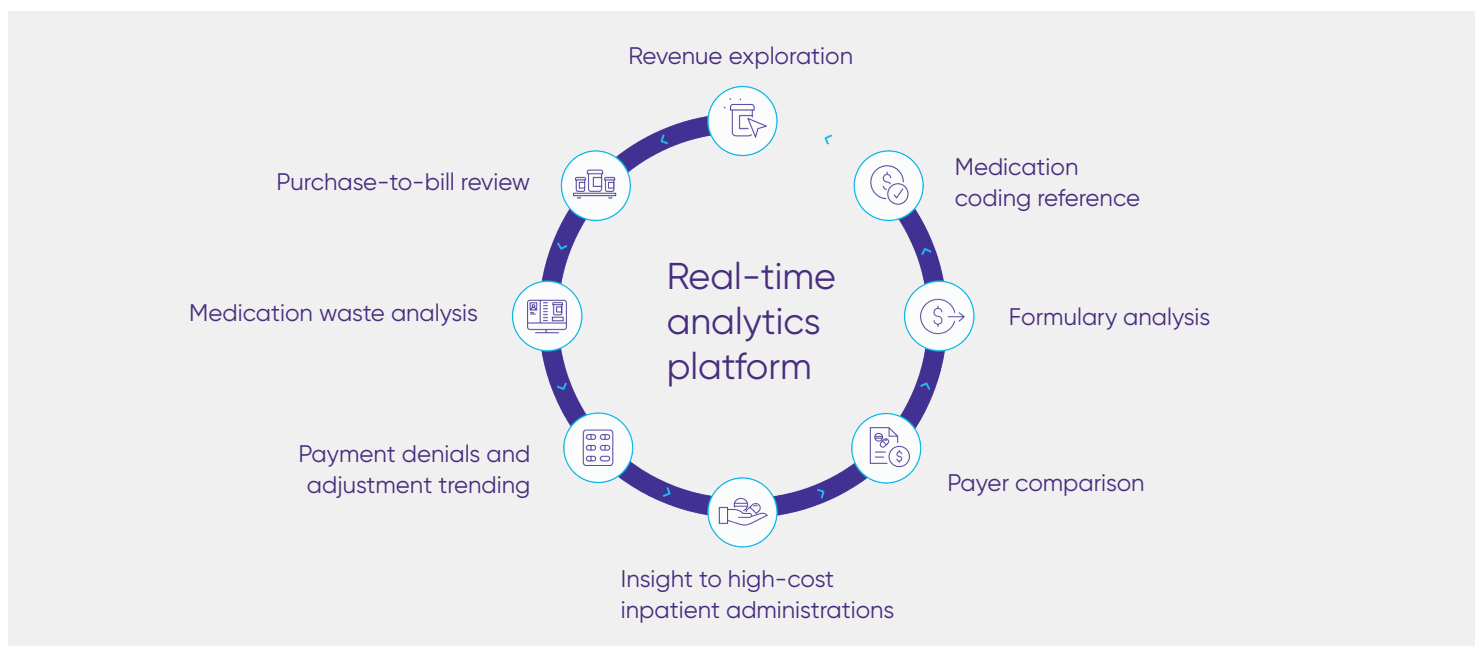

Identify revenue opportunities

- Improve charge capture from pharmacy dispense to drug reimbursement
- Determine if unused product was captured
- Ensure correct billing and reimbursement
- Make better formulary decisions with comparative cost and reimbursement metrics

Make more informed business decisions

- Turn insight into action with personalized business coaching
- Gain objective perspective on your performance with peer benchmarking
- Avoid denials and costly audits by seeing payer remittance and adjustments more clearly
